TITLE: Deodorant for e.g. ammonia,
amine(s), mercaptan(s) etc.

- obtd. by dissolving ferrous salt in
aq. soln. of

tartaric acid and/or a tartrate

PRIORITY-DATA: 1987JP-0003380 (January 12, 1987)

PATENT-FAMILY:

ABSTRACTED-PUB-NO: JP 63277058A

BASIC-ABSTRACT:

Agent is prepd. by dissolving a ferrous salt in an aq.
soln. of tartaric acid
and/or a tartrate. Another new remover is prepd. by making
the soln. of the
ferrous salt supported with a formite mineral. The mineral
is a natural or an
acid-treated one.

Pref. formite minerals include sepiolite and attapulgite.
Pref. tartrates
include the K, Na and K-Na salts. The blend ratio is
usually 1 wt. pts. of
the iron salt and 0.01-0.2 wt. part of the tartrate.

USE/ADVANTAGE - The agent has high deodorising effect

against bad-smelling
gases such as NH₃, amines, mercaptans and H₂S. With the
natural mineral as a
support, its prepn. is simple and economical. It is used
as a deodorant for
refrigerators, cars, clog cabinets, hygienic prods. such as
nappies, industrial
applications, gas filters and compost.
